Senior R&D Developer, Adobe Basel  
Apache Software Foundation Member and Director

Open World Forum, Paris, October 2013  
slides revision 2013-09-27

**what**  
is open development?

(it's like open source)

**open**  
everybody gets the same information

# meritocratic

nobody knows you're a dog

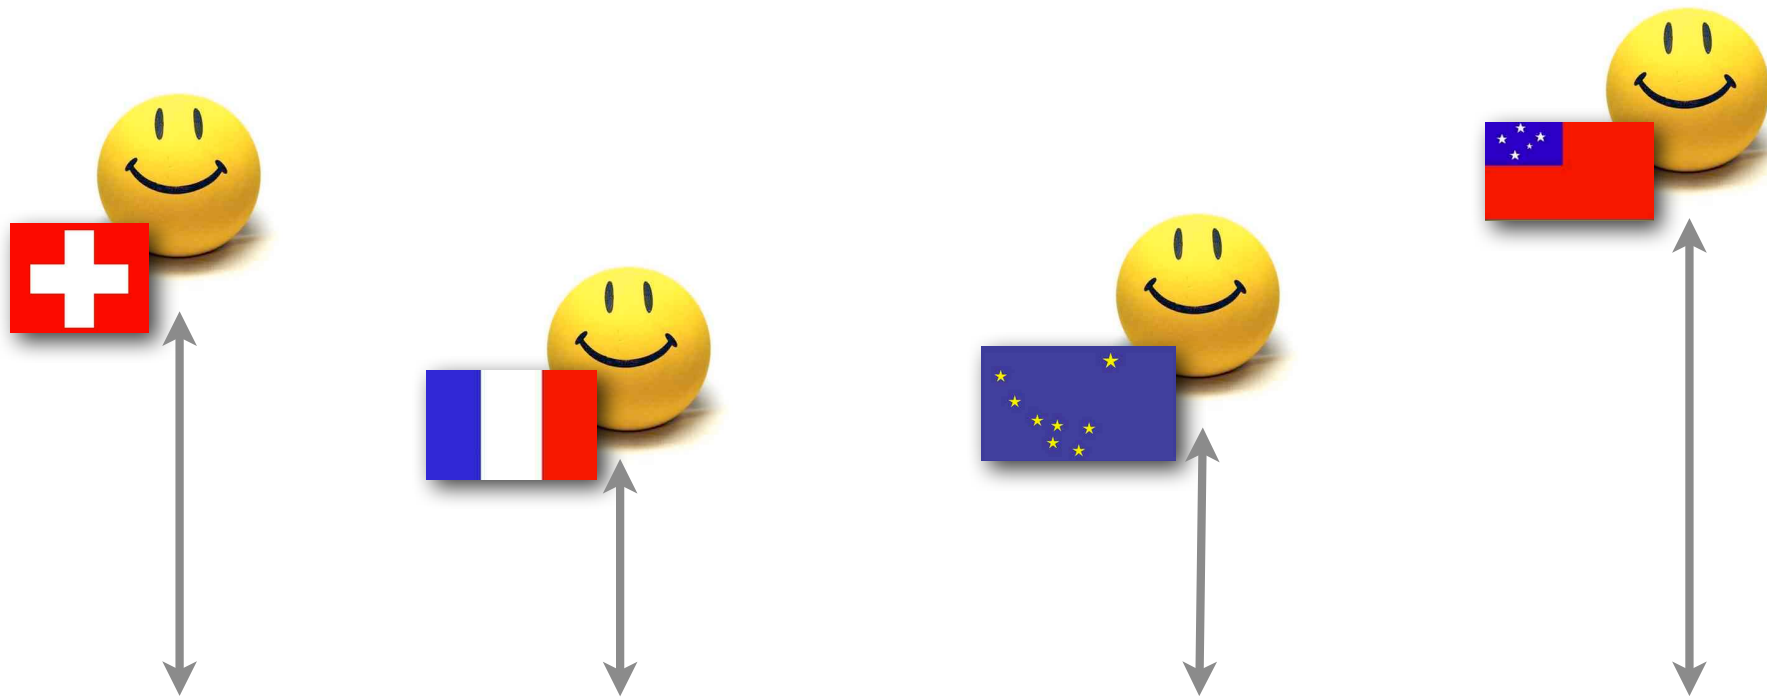

# sustainable

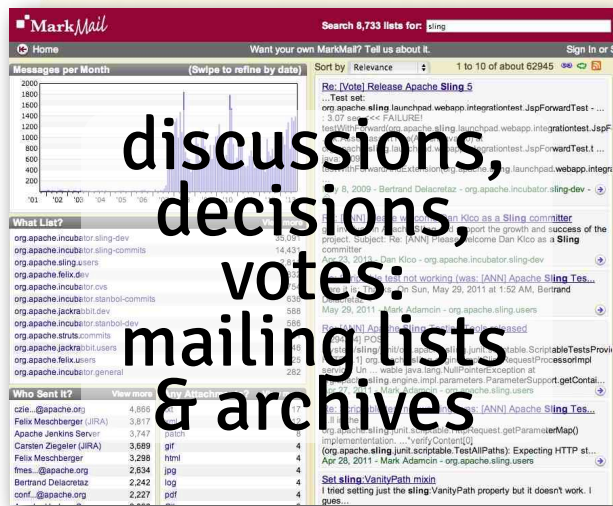

conflict resolution rules  
self-service archives  
exposure promotes quality

how

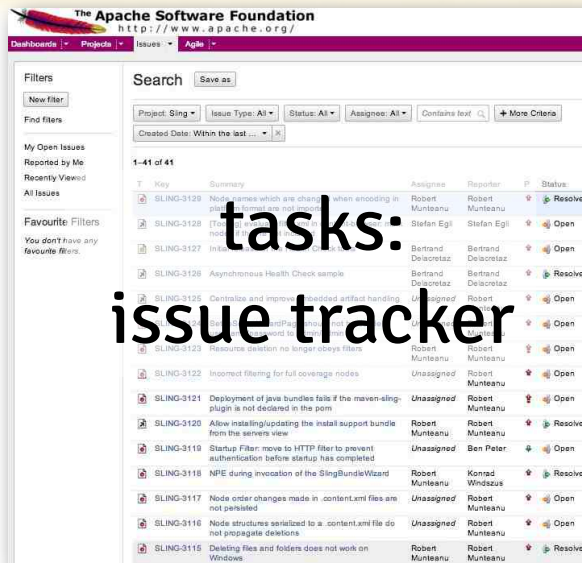

to implement open development?

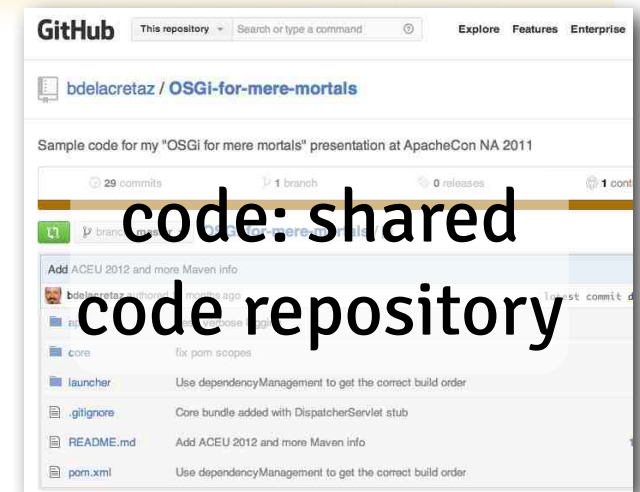

“centralized open collaboration bus”

discussions,  
decisions,  
votes  
mailing lists  
& archives

tasks:  
issue tracker

code: shared  
code repository

# Core Rules

Discuss + decide  
**on the mailing list**

On

Only work on things **backed by an issue**  
in the tracker.

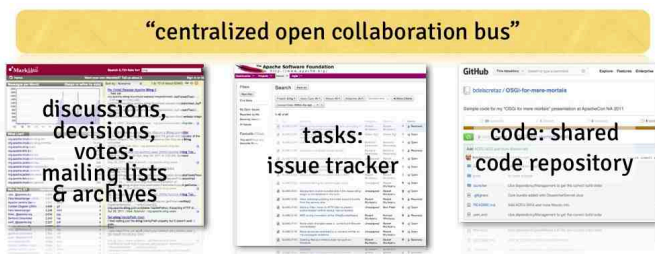

So

So

Put everything in the **source code control system**,  
early and often.

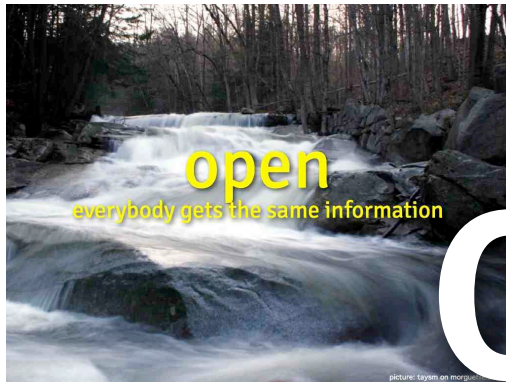

S

If it's important,  
it needs a **permanent URL**.

# Open development?

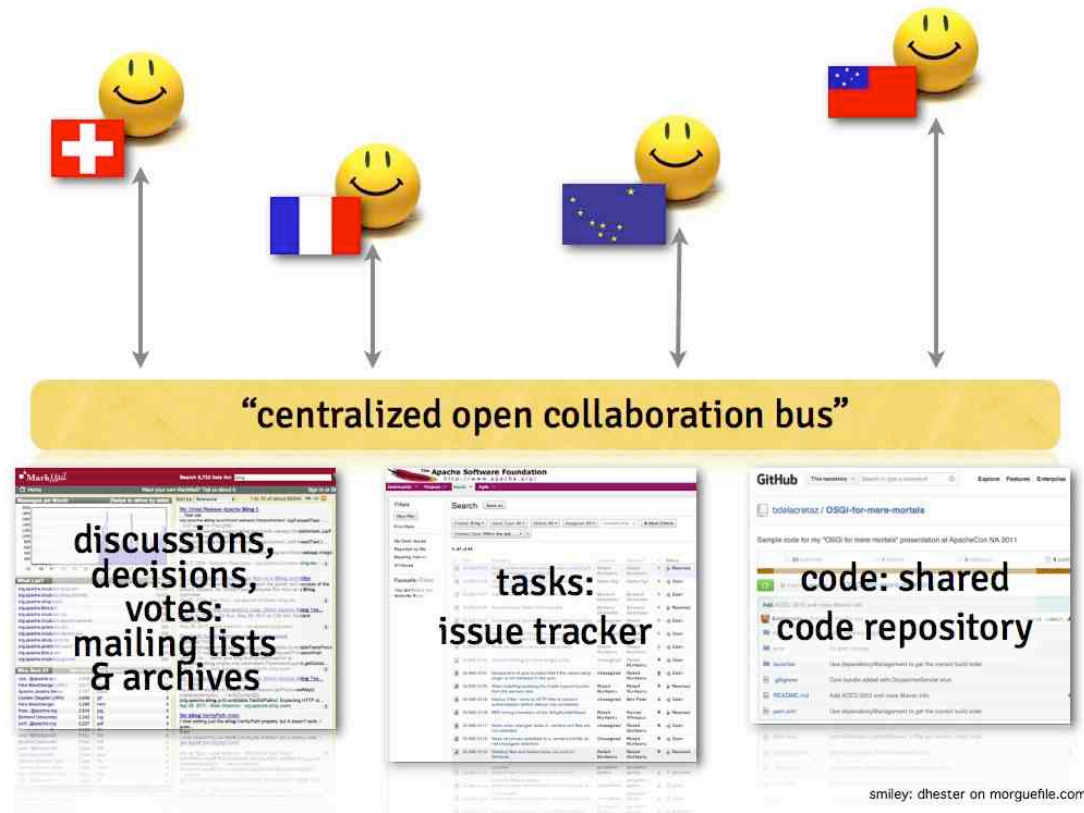

O

S

m

Just say no to 1-1 email and boring status meetings!
